10:40	7. Circular Economy Definition Proposal <p>A circular economy is a systems solution framework that tackles global challenges like climate change, biodiversity loss, waste, and pollution. It is based on three principles, driven by design:</p> <ul style="list-style-type: none"> eliminate waste and pollution, circulate products and materials (at their highest value), and regenerate nature. <p>It is underpinned by a transition to renewable energy and materials. Transitioning to a circular economy entails decoupling economic activity from the consumption of finite resources.</p>

	<i>Ultimately, a circular economy is greater than a system of transactions, supply, and demand; it is a mission-driven approach to establishing a sustainable system of consumption that is both environmentally and economically beneficial.</i>
